

LEWIS MOTEN

Selected Projects | Front-End Engineering, Applied AI & Creative Tools

Public work and live demos, followed by selected application screens.

PROJECT INDEX / 01

Applied AI and visualization

Zogograph Client | AI-assisted server monitoring

PHP/SQLite collectors and a JavaScript dashboard make server telemetry, alerts, and diagnostics readable. An AI assistant calls diagnostic tools and tracks the cost of an investigation.

[Source](#) | [Videos](#)

Palace-9 | Local model inspection

A playable tic-tac-toe lab pairs a deterministic controller with a compact MoE model trained from scratch. It uses the Qwen2-MoE architecture for Ollama and llama.cpp compatibility without a custom fork; the browser inspects checkpoints locally.

[Live demo](#) | [Source](#) | [Ollama](#) | [Hugging Face](#) | [Video](#)

D64 Storage Lab | Repair and optimization

A JavaScript workbench maps Commodore 64 disk sectors and file chains, estimates read efficiency, repairs corruption, restores deleted files, and compares optimized and fragmented layouts.

[Live demo](#) | [Source](#) | [Video](#)

Sculpted Prim Toolkit | Three.js editor

Decodes Second Life-style RGB sculpt maps into editable 3D geometry. Camera views, mesh overlays, textures, and vertex tools support PNG, glTF/GLB, OBJ, and STL exports.

[Live demo](#) | [Source](#) | [Videos](#)

Audio, Unicode, and public tools

Data Over Audio | Web Audio API

Transfers text and binary data through sound using MFSK modulation, packetization, CRC checks, Hamming error correction, interleaving, and repeat requests.

[Live demo](#) | [Source](#) | [Videos](#)

Emoji Explorer | Unicode and pixel font

A localized Unicode explorer with version and sequence filters, favorites, keyboard navigation, and offline PWA support. Includes a custom 12 x 12 Pixel Emoji font and pixel editor.

[Live demo](#) | [Source](#) | [npm](#)

Dreamy Tags | WordPress plugin

An open-source PHP/Gutenberg plugin for category- and tag-filtered clouds, with exclusion rules and minimum-use thresholds. Published as a block, widget, and shortcode.

[Plugin directory](#) | [Source](#)

Restoring the Signal | Dialable exhibit

A live installation at Stone Branch Center for the Arts joins Raspberry Pi, Asterisk, and a PHP contribution site. It handles telephone audio, dialplans, transcription, and TTY support.

[Live demo](#) | [Source](#) | [Videos](#) | [Press and photos](#)

Browser tools and creative projects

QR Code Generator | Creator and inspector

A browser tool backed by a first-party ES module for mixed segmentation, versions 1-40, Reed-Solomon correction, mask selection, and structural inspection.

[Live demo](#) | [Source](#)

Tiny Pockets Press | Miniature publishing

A modular JavaScript editor for miniature books, with layout and imposition logic and separate interior and cover print/PDF views.

[Live demo](#) | [Source](#) | [Videos](#)

Shoomi's HomePage | GeoCities restoration

A 1990s web restoration with a Canvas recreation of its Java applet marquee, Web Audio MIDI playback, and a browser version of a Visual Basic color editor.

[Live demo](#) | [Source](#) | [Videos](#)

ADDITIONAL SYSTEMS WORK

Agent delivery pipeline: OpenClaw agents claim and review tasks in private Forgejo repositories; build runners deploy previews to remote servers. WHM/cPanel API calls create subdomains and SSL certificates, while SQLite keeps early projects portable.

FOIA and meeting media: document management, live Swagit capture with gap handling and time preservation, MP4 assembly, and earlier audio transcription. Private implementations can be discussed in an interview.

The screenshot displays the Sony Vegas Pro 10.0b interface. At the top, the 'Camera' menu is open, showing options like 'New', 'Settings', 'Properties', and 'State'. The 'Project Monitor' window shows a 3D render of a bowl of ramen. The 'Event Viewer' window shows a list of events, including 'Audio', 'Video', and 'Image'. The 'Toolbox' window shows various tools like 'Camera', 'Selection', 'Move', 'Rotate', and 'Scale'. The 'Properties' window shows the 'Position' and 'Scale' properties for the selected event. The 'Timeline' window shows the 'Audio' and 'Video' tracks. The 'Preview' window shows the 'Audio' and 'Video' tracks. The 'Effects' window shows the 'Audio' and 'Video' tracks. The 'Audio' window shows the 'Audio' tracks. The 'Video' window shows the 'Video' tracks. The 'Image' window shows the 'Image' tracks. The 'Audio' and 'Video' tracks are visible in the 'Timeline' and 'Preview' windows. The 'Effects' window shows the 'Audio' and 'Video' tracks. The 'Audio' window shows the 'Audio' tracks. The 'Video' window shows the 'Video' tracks. The 'Image' window shows the 'Image' tracks. The 'Audio' and 'Video' tracks are visible in the 'Timeline' and 'Preview' windows. The 'Effects' window shows the 'Audio' and 'Video' tracks. The 'Audio' window shows the 'Audio' tracks. The 'Video' window shows the 'Video' tracks. The 'Image' window shows the 'Image' tracks.

The screenshot shows the PALACE-G web application interface. At the top left is a 3x3 grid of letters: a, b, c in the first row; d, e, f in the second row; and g, h, i in the third row. To the right of this grid is the 'PALACE-G' header, which includes an 'Evaluate' button and a 'Figure: 1' dropdown menu. Further right is the 'WORD' section, displaying 'PERS' and '648.5K' points. The main part of the interface is a large 3D visualization of a game board, showing various colored blocks and a 'PERS' score of 648.5K. At the bottom right of this visualization, there is a 'PERS' score of 2.1M and a 'PERS' score of 648.5K. The bottom section also includes a 'PERS' score of 648.5K.
